Title: New York Times Upshot/Siena College: September 2018 Maine 02 Poll

Survey Organization(s): Siena College Research Institute

Sponsor(s): New York Times Upshot

Field Dates: September 12 - 14, 2018

Sample: Likely voters in Maine

Sample Size: 506

Sample Notes: Calls were made to a stratified weighted sample of voters from the L-2 Voter list via both land and cell phones. A likely-to-vote probability was computed for each respondent based on their stated likelihood to vote as well as by virtue of the imputation of a turnout probability score based on past voting behavior. This study is part of Roper Center's Recently Developed Methods Collection.

Interview method: Telephone Interview, Cell Phone; Telephone Interview, Landline

Weight Location: Columns 53-58 (x.xxxx) – Varname: FINAL_WE

No. of records per respondent: 1

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

The Roper Center Transparency Score Project is intended to measure disclosure of key elements of survey research. The Transparency Score is **not** an indicator of data quality. Transparency Project scores are calculated as follows: (10 points for providing a dataset+2 points for every other applicable core item+1 point for every applicable additional item)/(total possible points) X 10. Studies with a score >=9 and <=10 greatly exceed Roper Center requirements; scores >=8 and <9 exceed requirements; and scores >=6 and <8 meet Roper Center requirements.

Title

Maine 2 Poll 1 of 2

Sample Type

RV

Sample Description?

Registered Voters

Calls were made to a sample of Democratic voters from the L-2 Voter list via both land and cell phones. A likely-to-vote probability was computed for each respondent based on their stated likelihood to vote and by virtue of the imputation of a turnout probability score based on past voting behavior applied to their specific voting history. This probability to vote was applied as a weight along with a weight that considered age, region, and gender.

Sample Notes?

MOE?

4.8

This New York Times Upshot/Siena College ME 02 survey was conducted September 12-14, 2018 by telephone calls in English to 506 ME 02 voters. This poll has a margin of error of ± 4.8 percentage points. Calls were made to a stratified weighted sample of voters from the L-2 Voter list via both land and cell phones. A likely-to-vote probability was computed for each respondent based on their stated likelihood to vote as well as by virtue of the imputation of a turnout probability score based on past voting behavior. This combined probability to vote score was applied as a weight along with a weight that considered party, age, race/ethnicity, education, region within the district and gender. Polling support for this project provided by Institute for Policy and Opinion Research at Roanoke College, Reconnaissance Market Research, M. Davis & Company, and The Public Opinion Research Lab at the University of North Florida. The Siena College Research Institute, directed by Donald Levy, Ph.D., conducts political, economic, social and cultural research primarily in NYS.
